

MonitoringApp Privacy Policy

Last updated: May 29, 2026

MonitoringApp is a personal health and task monitoring Android application developed by Marcio Maciel Bastos. This Privacy Policy explains how MonitoringApp handles health and fitness information accessed through Huawei Health Service Kit / Health Kit.

Contact

Developer: Marcio Maciel Bastos

Contact email: marciomacielbastos@hotmail.com

App package: [br.com.marciobastos.monitoringapp](https://play.google.com/store/apps/details?id=br.com.marciobastos.monitoringapp)

Health Data We Request

With your explicit authorization, MonitoringApp may read the following data from Huawei Health / Health Service Kit:

- Step count and daily activity summary
- Heart rate, including latest and historical readings
- Sleep duration and sleep-related summaries
- Blood oxygen saturation (SpO2)
- Stress score
- Body or wrist temperature, when available from the device and Huawei Health
- Walking distance and workout or activity intensity minutes

MonitoringApp requests read-only access for these health data categories. MonitoringApp does not write health data to Huawei Health for the current MVP unless a future version clearly explains that change and requests additional consent.

Why We Use This Data

MonitoringApp uses Health Kit data only to provide user-facing health and productivity status features, including:

- Showing current or recent watch signals on the Status screen
- Showing daily activity and wellness summaries
- Helping the user understand energy, stress, sleep, and activity patterns
- Supporting future scheduling decisions based on general wellness signals

MonitoringApp does not use health data for advertising, cross-app tracking, insurance decisions, credit decisions, employment decisions, or sale to third parties.

How Data Is Collected

Health data is measured by the user's Huawei smartwatch or other compatible device, synced to Huawei Health, and then made available to MonitoringApp through Huawei Health Service Kit only after the user grants permission. Users may deny or revoke Health Kit permissions at any time through Huawei Health, HMS Core, Android settings, or applicable Huawei account settings.

Where Data Is Stored

MonitoringApp is designed as an on-device Android app. Health data displayed or cached by MonitoringApp is kept on the user's Android device in app-private storage. MonitoringApp does not currently operate its own backend server for Health Kit data.

Huawei Health and HMS Core may process and store health data under Huawei's own terms, privacy notices, and user settings. Communication with Huawei services is handled by Huawei SDKs and HMS Core.

Before any public production release that persists Health Kit records, MonitoringApp will use appropriate encryption at rest for stored health data, such as Android platform encrypted storage or an equivalent AES-256 based mechanism. Data transmitted through Huawei SDKs is handled by HMS Core over encrypted network channels.

Sharing

MonitoringApp does not sell, rent, or share Health Kit data with advertisers, data brokers, analytics brokers, or other third parties. Health data may be processed by Huawei Health, HMS Core, and Health Service Kit as necessary for the user-authorized integration.

MonitoringApp may disclose information only if required by law or if necessary to protect the rights, safety, or security of the user, the developer, or the application.

Retention

MonitoringApp keeps locally stored Health Kit data only as long as needed to provide app functionality, and no longer than 12 months unless the user chooses to keep it longer in a future version. Users can delete local app data by using the app's reset/delete controls when available or by clearing app storage/uninstalling the app from Android settings.

Revoking Huawei Health permissions stops future access by MonitoringApp but may not delete data already stored by Huawei Health. Users should manage Huawei Health data directly in Huawei Health or Huawei account settings.

User Choices and Rights

Depending on applicable law, including the Brazilian LGPD where applicable, users may request access, correction, deletion, portability, or information about the processing of their personal data by contacting the developer email above.

Users can also:

- Grant or deny Health Kit permissions during authorization
- Revoke permissions later through Huawei Health, HMS Core, or Android settings
- Delete local MonitoringApp data by clearing app storage or uninstalling the app
- Stop using the app at any time

Children

MonitoringApp is not intended for children under 18. The current MVP is intended for personal and family testing by adults. The app does not knowingly collect data from minors.

Medical Disclaimer

MonitoringApp is not a medical device. It does not diagnose, treat, prevent, monitor, or predict diseases or medical conditions. Health signals shown in the app are for general wellness and personal productivity awareness only. Users should consult qualified healthcare professionals for medical advice.

Security

MonitoringApp applies data minimization and requests only the Health Kit permissions needed for the app's stated features. The app does not use Health Kit data for advertising or profiling. Access to health data requires explicit user authorization through Huawei Health Service Kit.

No system is completely secure. If the developer becomes aware of a data incident affecting Health Kit data, the developer will take reasonable steps to investigate, mitigate, notify affected users where required, and notify Huawei where required by Huawei Health Kit policies.

Changes to This Policy

This policy may be updated as MonitoringApp evolves, especially if new Health Kit data types, storage behavior, backend services, or sharing practices are added. Material changes will be reflected in an updated policy document and, where required, additional user consent will be requested.
